Exploratory

Smoking vs. Age, Sex

(1): Smoking \sim age, sex

Is there a relationship between age and smoking status?

ANS: Yes, the proportion of smokers decreases with the age.

```
data$sex <- recode(data$sex, `1` = "male", `2` = "female")
data$cursmoke <- recode(data$cursmoke, `1` = "yes", `0` = "no")

smoke_v_age = data %>%
  select(cursmoke, age) %>%
  ggplot(aes(x = age, y = cursmoke)) +
  geom_jitter(height = 0.1, alpha = 0.1) +
  geom_smooth(lwd = 1.5) +
  theme_bw()
```

Does this relationship differ by sex?

ANS: There is a higher proportion of smoker among men compared to women as both age ,but there is no interaction between age and sex.

```
smoke_age_sex = data %>%
  select(cursmoke, age, sex) %>%
  ggplot(aes(x = age, y = cursmoke, group = sex, color = sex)) +
  geom_jitter(height = 0.1, alpha = 0.1) +
  geom_smooth(lwd = 1.5) +
  theme_bw()
```

(2) number of cigarettes ~ age, sex

Is there a relationship between the number of cigarettes smoked per day and age?

ANS: Yes, number of sigarets smoked per day stays constant for 30-50 years old and decreases with age after 50 years old.

All

```
n_c_age_all = data %>%
  select(cigpday, age) %>%
  ggplot(aes(x = age, y = cigpday)) +
  geom_jitter(height = 0.1, alpha = 0.1) +
  geom_smooth(lwd = 1.5) +
  theme_bw()
```

Smokers only

```
n_c_age_smoke = data %>%
  select(cigpday, age) %>%
  filter(cigpday > 0) %>%
  ggplot(aes(x = age, y = cigpday)) +
  geom_jitter(height = 0.1, alpha = 0.1) +
  geom_smooth(lwd = 1.5) +
  theme_bw()
```

Does this relationship differ by sex?

ANS: There is sex effect (men smoke higher number of cigarettes per day than women across age), but there is no sex and age interaction.

All

```
n_c_age_s_all = data %>%
  select(cigpday, age, sex) %>%
  ggplot(aes(x = age, y = cigpday, group = sex, color = sex)) +
  geom_jitter(height = 0.1, alpha = 0.1) +
  geom_smooth(lwd = 1.5) +
  theme_bw()
```

Smokers only

```
n_c_age_s_smoke = data %>%
  select(cigpday, age, sex) %>%
  filter(cigpday > 0) %>%
  ggplot(aes(x = age, y = cigpday, group = sex, color = sex)) +
  geom_jitter(height = 0.1, alpha = 0.1) +
  geom_smooth(lwd = 1.5) +
  theme_bw()
```

Smoking vs. health outcomes

(1) The relationship between current smoking status and systolic blood pressure.

smoking ~ sysbp

ANS: Proportion of smokers decreases with increase of systolic blood pressure

```
smoke_sbp = data %>%
  select(cursmoke, sysbp) %>%
  ggplot(aes(x = sysbp, y = cursmoke)) +
  geom_jitter(height = 0.1, alpha = 0.1) +
  geom_smooth(lwd = 1.5) +
  theme_bw()
```

ANS: slightly higher sysbp for non-smokers

```
smoke_sysbp_status = data %>%
  select(cursmoke, sysbp) %>%
  mutate(cursmoke = factor(cursmoke)) %>%
  ggplot(aes(y = sysbp, x = cursmoke)) +
  geom_boxplot(outlier.colour = "white") +
  theme_bw()
```

smoking ~ sysbp, sex

ANS: Proportion of smokers decreases with increase of systolic blood pressure; the proportion is higher for men (sex effect).

```
smoke_sysbp_sex = data %>%
  select(cursmoke, sysbp, sex) %>%
  ggplot(aes(x = sysbp, y = cursmoke, group = sex, color = sex)) +
  geom_jitter(height = 0.1, alpha = 0.1) +
  geom_smooth(lwd = 1.5) +
  theme_bw()
```

ANS: no differences in sysbp between male and female smokers and non-smokers

```
smoke_sysbp_sex_status = data %>%
  select(cursmoke, sex, sysbp) %>%
  mutate(cursmoke = factor(cursmoke),
         smoke_sex = interaction(cursmoke, sex)) %>%
  ggplot(aes(y = sysbp, x = smoke_sex)) +
  geom_boxplot(outlier.colour = "white") +
  theme_bw()
```

(2) The relationship between current smoking status and diastolic blood pressure.

smoking ~ diabp

ANS: Proportion of smokers decreases with increase of diastolic blood pressure for BP=100 and then proportion increases again (latter could be due to not enough data)

```
smoke_dbp = data %>%
  select(cursmoke, diabp) %>%
  ggplot(aes(x = diabp, y = cursmoke)) +
  geom_jitter(height = 0.1, alpha = 0.1) +
  geom_smooth(lwd = 1.5) +
  theme_bw()
```

ANS: no difference

```
smoke_dbp_box = data %>%
  select(cursmoke, diabp) %>%
  mutate(cursmoke = factor(cursmoke)) %>%
  ggplot(aes(y = diabp, x = cursmoke)) +
  geom_boxplot(outlier.colour = "white") +
  theme_bw()
```

smoking ~ diabp, sex

ANS: Proportion of smokers decreases with increase of diastolic blood pressure; the proportions are higher for men (sex effect).

```
smoke_dbp_s = data %>%
  select(cursmoke, diabp, sex) %>%
  ggplot(aes(x = diabp, y = cursmoke, group = sex, color = sex)) +
  geom_jitter(height = 0.1, alpha = 0.1) +
  geom_smooth(lwd = 1.5) +
  theme_bw()
```

ANS: no difference

```
smoke_dbp_s_bp = data %>%
  select(cursmoke, sex, diabp) %>%
  mutate(cursmoke = factor(cursmoke),
         smoke_sex = interaction(cursmoke, sex)) %>%
  ggplot(aes(y = diabp, x = smoke_sex)) +
  geom_boxplot(outlier.colour = "white") +
  theme_bw()
```

(3) The relationship between current smoking status and serum total cholesterol.

smoking ~ totchol

ANS: Proportion of smokers slightly decreases with increase of total cholesterol values

```
smoke_tc = data %>%
  select(cursmoke, totchol) %>%
  ggplot(aes(x = totchol, y = cursmoke)) +
  geom_jitter(height = 0.1, alpha = 0.1) +
  geom_smooth(lwd = 1.5) +
  theme_bw()
```

ANS: no difference

```
smoke_tc_bp = data %>%
  select(cursmoke, totchol) %>%
  mutate(cursmoke = factor(cursmoke)) %>%
  ggplot(aes(y = totchol, x = cursmoke)) +
  geom_boxplot(outlier.colour = "white") +
  theme_bw()
```

smoking ~ totchol, sex [!!!]

ANS: Proportion of smokers has nonlinear relationship with total cholesterol for women; proportions increase with increase in total cholesterol for men (sex by totchol interaction effect).

```
smoke_tc_sex = data %>%
  select(cursmoke, totchol, sex) %>%
  ggplot(aes(x = totchol, y = cursmoke, group = sex, color = sex)) +
  geom_jitter(height = 0.1, alpha = 0.1) +
  geom_smooth(lwd = 1.5) +
  theme_bw()
```

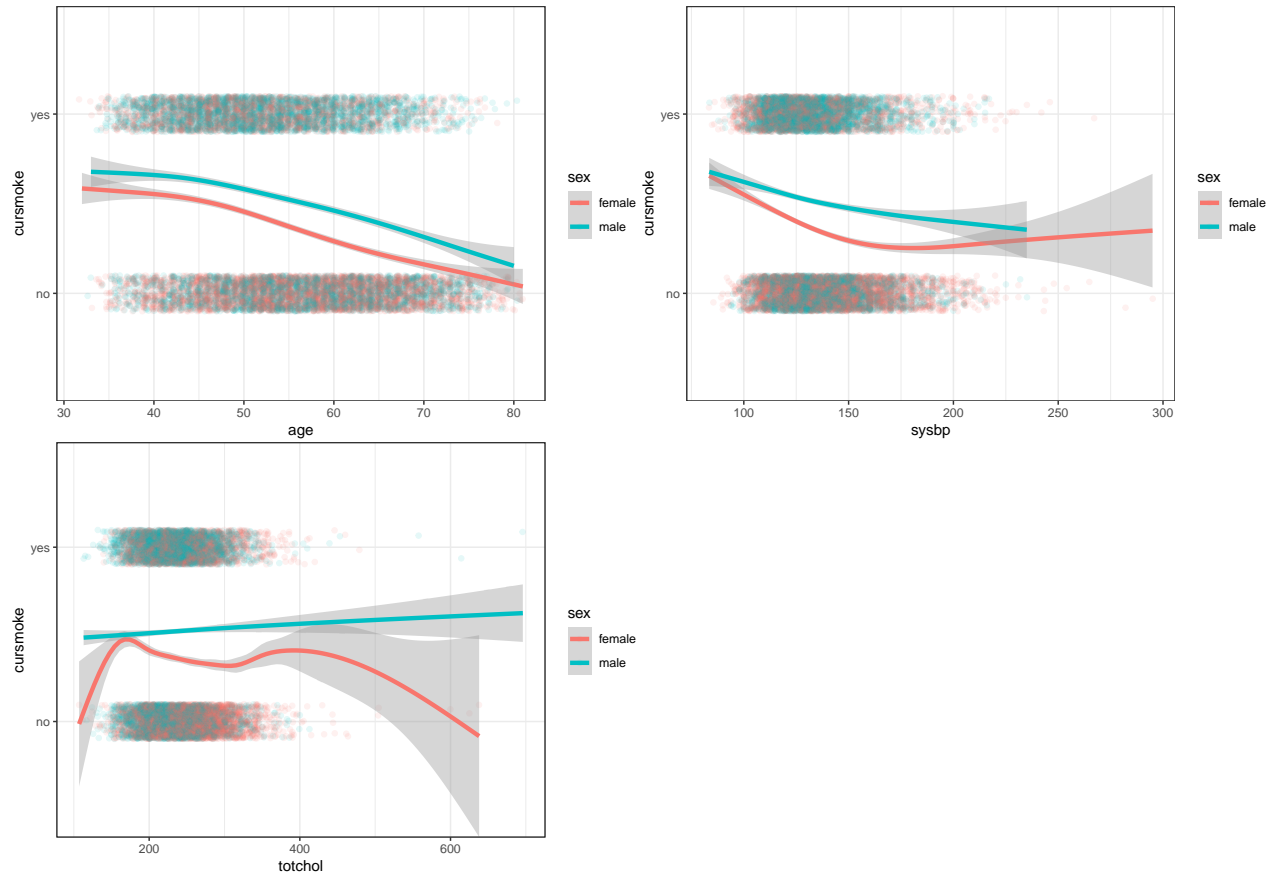

ANS: no difference

```
smoke_tc_sex_bp = data %>%
  select(cursmoke, sex, totchol) %>%
  mutate(cursmoke = factor(cursmoke),
         smoke_sex = interaction(cursmoke, sex)) %>%
  ggplot(aes(y = totchol, x = smoke_sex)) +
  geom_boxplot(outlier.colour = "white") +
  theme_bw()
```

```
smoke_age_sex
smoke_sysbp_sex
smoke_tc_sex
```

```
